sunfiber™

Introducing Sun Fiber™, Sun Gro's unique, 100% wood fiber substrate. Sun Fiber is a highly porous, precisely engineered coarse fiber that provides a balanced blend of moisture retention and aeration. Useful as a peat extender or cost-conscious alternative to perlite and fine bark for mix-your-own growers. Easy to expand, moderate moisture to reduce dust, and consistent flow through hoppers and pot filling equipment. Sun Fiber is suitable for use in a wide range of greenhouse container sizes and commercially grown plants, including organic food crops.
