DIRECTIONS FOR USE

Mixing Concentrated Fertilizer Solutions:

The table below lists how much Technigro fertilizer by weight to blend into a given volume of water to make a concentrated fertilizer solution. Recommended fertilizer concentrations are for a continuous feed program. However, the Technigro formula (NPK) and concentration (ppm) most suitable for individual use should be determined by soil and water analysis as well as plant response. Various target concentration and common injector ratios are included. Technigro dissolves faster in hot water. When mixing a concentrated solution with cold water, stir well and allow ample time for fertilizer to dissolve before using.

ppm N	USAGE RATES					
	For fertilizers with 17% N analysis					
	Ounces of fertilizer per gallon of water for given injector ratio					
	No Injector	1:15	1:100	1:128	1:200	1:300
25	0.02	0.3	2.0	2.5	3.9	5.9
50	0.04	0.6	3.9	5.0	7.9	11.8
75	0.06	0.9	5.9	7.5	11.8	17.7
100	0.08	1.2	7.9	10.1	15.7	23.6
150	0.12	1.8	11.8	15.1	23.6	35.3
200	0.16	2.4	15.7	20.1	31.4	47.1
300	0.24	3.5	23.6	30.2	47.1	70.7
400	0.31	4.7	31.4	40.2	62.8	94.2

NOTE: This table does not consider maximum solubility limits.

A soluble salts or conductivity meter can be used to estimate the concentration of fertilizer solutions. The correct electrical conductivity (EC) in millisiemens per centimeter (mS/cm) is listed below for various ppm nitrogen concentrations. When measuring the conductivity of fertilizer solutions, be sure to subtract the conductivity of the water from the measured value of the fertilizer solution.

ppm N	mS/cm
50	0.38
100	0.76
150	1.14
200	1.52
300	2.28
